

Week 8 : SOFTWARE DEVELOPMENT TOOLS AND ENVIRONMENTS

GitLab

Gitlab CE and Gitlab EE

GitLab CE (Community Edition) and GitLab EE (Enterprise Edition) are two different versions of GitLab, a web-based platform for managing Git repositories and performing DevOps and collaboration tasks. Here are the key differences between them:

1. Licensing:

- **GitLab CE is open-source and free to use.** It is typically suitable for small to medium-sized teams and organizations that do not require advanced features or extensive support.
- **GitLab EE is the paid,** commercial version of GitLab. It includes additional features and support options. It is designed for larger enterprises and organizations that need more advanced capabilities and support.

2. Features:

- GitLab CE includes a wide range of features for source code management, continuous integration and continuous delivery (CI/CD), issue tracking, code review, and more. However, some advanced features are only available in GitLab EE.
- GitLab EE includes all the features of CE and adds extra capabilities, such as advanced CI/CD features, group-level and instance-level governance, security scanning, and more.

.
